

P2A Navigator Release Notes

October 7, 2026

10/07/2026 8:03 am CDT

Hi, we have new release information for P2A Navigator.

New Features

Metrics (Refreshed and Enhanced)

We're introducing a refreshed user interface and enhanced support for metrics in this release. The interface for creating, entering data, and viewing historical information for metrics has been redesigned for this release. Metrics can be added from a library of metric templates or created from scratch. Additionally, we've added new support for automated metric collection and reporting through existing integrations. Currently the integrations supported are with Atlassian's Jira and Microsoft's Azure DevOps (ADO) systems. Company administrators can configure and enable those metrics to be automatically collected at the business unit level.

See the [Metrics](#) page for more details about this feature.

Updates

- Business Unit View – A new **Envision** section has been added to the business unit specific view. This section includes the two overarching concepts for continuous improvement: prioritizing business outcomes and creating metrics to quantify changes. We labeled it Envision to reinforce the concept of setting goals and a vision for improvement. Both, prioritizing business outcomes and capturing metrics are accessible for each business unit.

Bug Fixes

- Smart Polls – Fixed error resulting from facilitators clicking "Next" through all the capabilities in a poll without scoring any of them.

As always, contact us either by clicking the Contact Support button in the top navigation of Navigator or by writing to us at support@pathtoagility.com. Thank you for being a Path to Agility Navigator user!
